### Figure 1. Factors and evidence considered by the ACIP in developing immunization policy

| Policy issues | Public health priority  
|              | Disease burden  
|              | Economic and financial issues  
|              | Vaccine safety and efficacy  
|              | Alternative interventions (other measures available for prevention and control of such disease)  
| Programmatic issues | Strength of existing EPI  
|                    | Vaccine supply availability  
|                    | Vaccine presentation  
| Outcome of the consideration | To introduce the vaccine into the EPI  
|                        | To wait for affordable price or other data before introducing the vaccine into the EPI  
|                        | Not to introduce the vaccine into the EPI  |
