

PCV vaccines indicator

Acceptability to stakeholders

Acceptability of the vaccine and of vaccination against the disease

Acceptability of the PCV in LMICs is generally high, but varies based on awareness, accessibility, and cultural beliefs.

In China there is a substantial local demand for vaccinating children with PCV13 and partial payment for the vaccine was widely accepted. ¹

In Nairobi, Kenya Income, parity, education level, age and occupation of the caregiver significantly influenced the uptake of PCV. ²
